Meet MediQuant

MediQuant is healthcare's leading provider of active data archiving technology for the enterprise, delivering comprehensive system transition support and a secure, versatile, interoperable repository for legacy data.

**Founded
in 1999**

**225
Employees**

**Deep clinical,
patient accounting
and HIM experience**

Data Migration

The industry experts in HIS, EMR and EHR system transitions.

Data Conversion

Securely extract and organize data from diverse platforms.

Data Archiving

Decommission legacy systems and maximize use of legacy data.

Healthcare providers use MediQuant to:

- **Save millions decommissioning legacy systems**
- **Consolidate systems and data silos**
- **Simplify access to valuable data**
- **Minimize risk and resources**
- **Meet regulatory requirements and avoid fines**

**Ready to work with Healthcare's
trusted archive partner?**

MediQuant has successfully navigated thousands of system archives

1.1B+

accounts archived

500M+

patient records archived

500+

health system clients

MediQuant has archived more systems and modules than any other data management company in healthcare. From the world's best known EHRs to homegrown or mainframe systems – we've seen and successfully converted or archived them all, including:

- Epic
- Cerner
- McKesson
- MEDITECH
- GE
- Allscripts
- Parallon
- MEDHOST
- NextGen
- Greenway Health
- And hundreds more...

DataArk®

Our flagship product, DataArk®, is the industry gold standard in legacy data archives – a single, scalable common repository with robust interoperable functionality.

DataArk features modules specifically created for converting and archiving data from Clinical, Patient Accounting, and ERP Systems.

OpenArk™

OpenArk® is our HIPAA- and ODBC-compliant, MediQuant-hosted, low-cost archive that provides secure storage for infrequently accessed, but highly valued, data. OpenArk offers greater efficiency in meeting information governance requirements, with formerly disparate data now residing in one secure, SQL database that replicates your legacy systems' structures.

ApplicationArk™

MediQuant's enterprise application rationalization tool automates the manual tasks of inventorying and managing enterprise applications. By applying algorithms and logic to the data, ApplicationArk® analyzes inventory, identifying duplicate systems, their cost-to-business ratio, technical quality, functionality, interface needs and contractual obligations.

ArchiveInsights™

ArchiveInsights® transforms your legacy data into a treasure trove of business intelligence and reporting that fuels smart decision-making, making it easy to visually display data, utilize reporting tools, and extract business intelligence. Query datasets in DataArk and present the findings in easy-to-digest dashboards and reports including Financial, AR, Clinical and HIM dashboard views.

Proven processes and expertise

- » Expert project managers create and execute to enterprise plan customized to your systems and timelines.
- » MediQuant's unique implementation consultants are your expert resource to ensure project success.
- » Time-tested, vendor-specific validation scripts are used to ensure data quality, proactively identify issues, and get your project right the first time.

What our clients are saying

"MediQuant was at the table with us – with a project manager and technical support team that worked side-by-side with our teams."

Lisa Stump, Senior VP and CIO,
Yale New Haven Health

"Thanks to MediQuant and DataArk, we were able to shut down legacy systems and avoid prohibitive fees, plus we have recovered over \$11 million in receivables."

Greg Carda, Chief Financial
Officer, Missouri Delta Medical
Center

"We spoke with other vendors, but most were unable to work through our unique challenges."

Stephanie LeMay, Program
Manager of Enterprise Data
Archiving, MaineHealth
